Planned Infrastructure Improvements Essential for Future of Casa Grande

CASA GRANDE, AZ— In order to support its residents and enable future growth, the City of Casa Grande works diligently to ensure that the necessary resources and services are available. This includes an ongoing process of evaluating City infrastructure and implementing critical enhancements.

One of these enhancements is a sewer line extension for the eastern region of Casa Grande, an area slated to potentially serve 16,000 new homes and 44,000 new residents as the City continues to expand around Interstate 10. While planned in conjunction with the development of PhoenixMart, this sewer line extension is a critical investment for Casa Grande's residents and economic development.

In 2015, the City entered a sewer extension agreement with AZ Sourcing, PhoenixMart's parent company, outlining the scope of this work. This agreement stipulates that AZ Sourcing is solely responsible for the financing of the engineering and design components of this project. To date, the City has not expended any funds towards the construction of this sewer line, but has spent approximately \$172,000 on the pre-construction and right-of-way acquisition services necessary for future development.

All major infrastructure enhancements are proposed and reviewed during City Council meetings, which are open to all members of the public. A Council meeting schedule and calendar, as well as meeting minutes and documents, can be accessed online at <http://casagrandeaz.gov/council/agenda/>.
